

**Room control unit for room automation,
configurable, with multifunctional display
and Modbus connection**

RYMASKON® stands for a series of multifunctional room control units.

The individually configurable RYMASKON® 200-Modbus enables automated monitoring and control of the indoor climate and illumination in a Modbus network. It provides three digital inputs and a universal input, which allows connection of up to four external push buttons or switches. It can be configured remotely from a higher-level Modbus master and integrated into a cross-building room climate monitoring and data acquisition system. Internal sensors record room temperature, relative humidity and dew point.

Up to eight capacitive function buttons on the front panel of the compact unit can be used for on-site operation and configuration. A buzzer sounds to acknowledge button use and can also be used as an acoustic fault or alarm warning.

The dimmable multifunctional display is designed specifically for room operation and uses intuitive symbols for a clear view of all available spatial data. Besides the time, date and climate parameters (temperature, humidity, dew point, CO₂ content), it can also display additional features, such as fan mode or room occupancy. The back light colour can be adapted to the room design.
